 Clara
by AGC

"I DON'T BELIEVE ARCHITECTURE HAS TO SPEAK TOO MUCH. IT SHOULD BE SILENT AND LET NATURE SPEAK IN THE GUISE OF SUNLIGHT AND THE WIND", SAID THE FAMOUS JAPANESE ARCHITECT TADAO ANDŌ. HE WOULD HAVE LIKED CLARA WINDOWS.

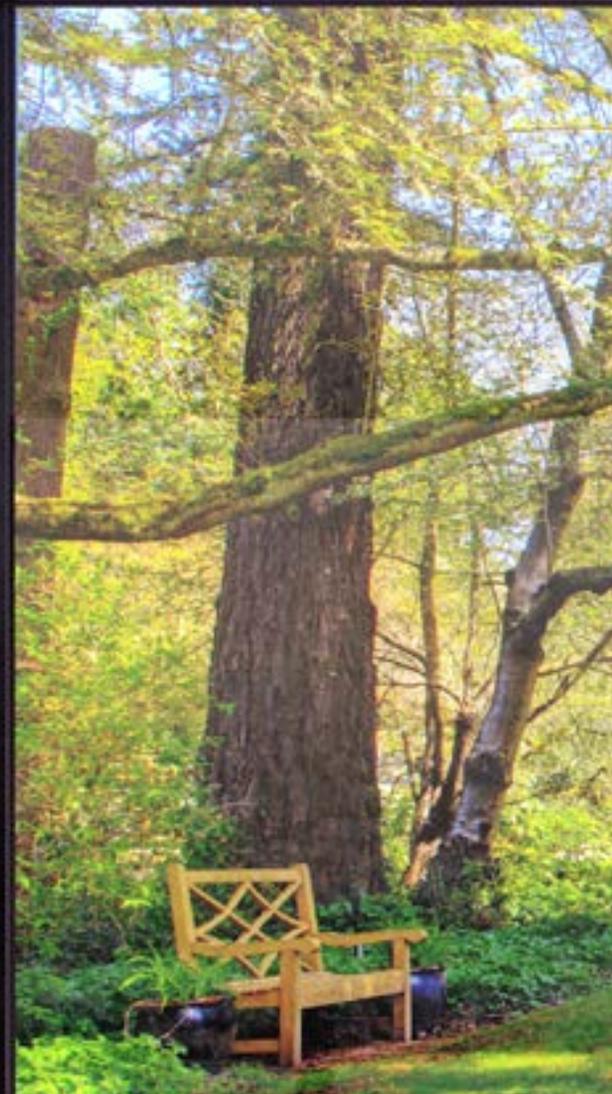

CLARA. THE WINDOW WITH A VIEW

Architects and lovers of timeless, sophisticated buildings will love Clara windows, the world's first frameless windows with a casement made entirely of glass.

The elegant and refined design perfectly complements contemporary architecture, fills rooms with light and offers almost unlimited freedom of design.

The Clara lift-and-slide door with frameless fixed glazing seamlessly takes its place within this innovative window series. Continuous glass surfaces allow the boundaries between the interior and exterior to merge and let in up to 15% more light into the rooms.

Clara, the window with a view. Made in Switzerland.

THE FULL RANGE CLARA FENSTER

Clara Fenster is the world's first frameless window with a casement made entirely of glass.

It fills rooms with light and offers almost unlimited design freedom.

The possible combinations are endless:

- Clara Uno₈₆: comes with a flush design on the inside between the frame and the sash. In addition, a concealed sash on the outside behind the aluminium shell facilitates a minimalist, modern and filigree design to ensure maximum levels of lighting gain.
- Clara Duo: with a unique design, which has a flush finish both on the inside between the frame and sash, and at the same time on the outside between the aluminium shell and sash.
- Clara lift-and-slide doors: a sliding leaf with a flat surface, an effortless handling. An easily opening and closing thanks to the comfortable SOFT CLOSE function.

ELEGANCE WHICH WILL ENTHRAL YOU

Clara windows and lift-and-slide doors capture people's emotions in a variety of ways: the elegant appearance, which adapts perfectly to personal preferences in terms of interior design and architectural style, the smooth surfaces that appeal to both the haptic and the visual senses, the intelligent window design that fascinates every technology enthusiast.

FOR ALL THOSE PEOPLE WHO DESIRE MORE

More design freedom:
You can choose from the entire RAL IGP color palette for the colors of the frame construction as well as the enamel edges inside and out.

More energy efficiency:
Outstanding thermal insulation value (U_w value) of 0.92 and Minergie standard thanks to triple glazing and innovative coatings.

A greater feeling of well-being:
A higher incidence of light means a greater feeling of well-being - this is the simple Clara wellness formula. An additional convenience benefit: easy cleaning, as the window frame and casements are on one level.

More security:
Thanks to the specially hardened glass panes and the anti-burglary locking mechanism, it is practically impossible to lever open the doors.

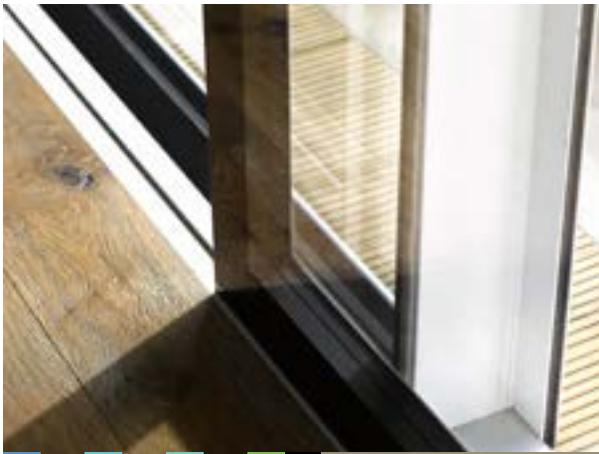

SMOOTH AND STRONG WITH SOFT CLOSE

Thanks to the innovative SOFT CLOSE function, it is a child's play to open and close a large panoramic sliding door. SOFT CLOSE gently slow down the casement just before its final position, and then close it automatically.

It allows to minimize at the same time injury's risk and the strengths acting on materials and buildings.

All the benefits:

- The door can be slid effortlessly
- Slow down and automatically closes the casement smoothly and safely
- Prevents malfunction and injuries, particularly among children
- No sudden slams or damage to the building
- A sophisticated design complied with a hidden mechanism

SWIVEL HOOK: UNCOMPROMISING, WATERPROOF AND SECURE

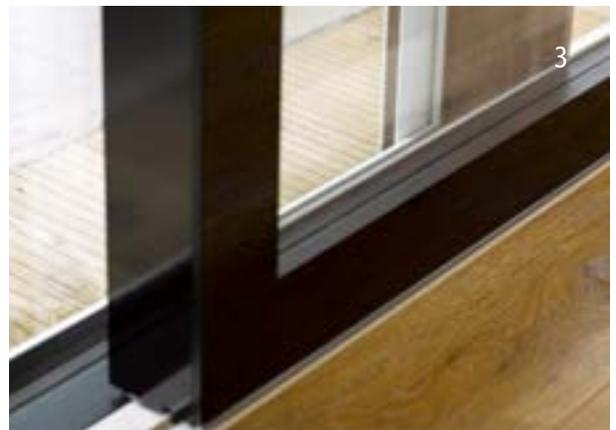

The swivel hook with integrated locking function guarantees first-class sealing and high resistance to burglary. In the open state, it is perfectly flush with the surface, then slides smoothly and without wear in the frame part via shutter rollers and reduces the load on the gear.

- 1 Continuous glass surface: Both casements are designed flush with one another, without steps and edges.
- 2 Simple operation: Smooth closing mechanism and roller-mounted sliding sash make opening and closing the door child's play.

- 3 Functional components such as the locking mechanism, fittings or seals are elegantly concealed behind 80 mm narrow, surrounding enamel strips.

Low thresholds provide the necessary levels of accessibility and prevent tripping hazards.

TECHNICAL DATA OF THE CLARA LIFT-AND-SLIDE DOOR

Technical drawings, cut sections, test reports and certificates are available for download at www.clarafenster.ch. We shall of course be at your disposal at any time if you have any further questions or wish to visit our showroom.
